All ages for 2014 - 2015

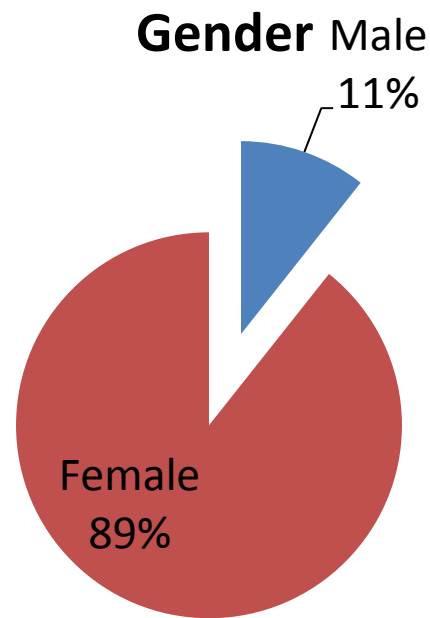

Total 1632 cases: Population 3.5 million

527 Child cases 2014-2015

Gender 2014-2015

What did we want to achieve?

- A film that captured the range of people we see
- A film that gave our clients a voice
- A film that would change the way professionals behave

Why was it important?

- How do you convey impact on mental health without talking to people?
- Unique ability to access key professionals working in the field

How did we decide who?

- Our team approached clients
- Our clients approached us

How did we do it?

- One day intensive filming
- Kept our clients separate – gave them space – no one was rushed and no one waited
- Interview questions were planned but not prescriptive
- They were ready to talk

What was the impact?

- On the audience
- On our staff
- On our clients

Result?

THANKYOU
