

NUH End of Life Care Collaborative Project

Improving the sharing of the patients' end of life plan of care between secondary and primary care settings.

Category: Personalisation of Care

Project Team –

Sim Lan Koon, Consultant in Palliative Medicine,

Nicola Jones, Macmillan CNS Palliative Care,

Daljit Athwal, Deputy Chief Nurse,

Katie Moore, HOS for PPI,

Roz Bexon, Macmillan CNS Palliative Care,

Jeremy Lewis, Consultant Acute Medicine and Trust Caldicott Guardian,

Sandra Minich, Better for You Programme Manager

National Strategy - End of Life Care (EoLC)

The Six Ambitions

- 01 Each person is seen as an individual
- 02 Each person gets fair access to care
- 03 Maximising comfort and wellbeing
- 04 Care is coordinated
- 05 All staff are prepared to care
- 06 Each community is prepared to help

The National Strategy recognises the importance of coordinated care within teams and between services in primary and secondary care.

Regional guidance

- Focused around the 5 priorities for care of a dying person:
- It emphasized on the importance of coordination of care, and sharing and recording of patient's individual care plan
- Recommended Electronic palliative care coordination system (EPaCCS) as a tool for effective communication between primary and secondary care

NUH Strategy - End of Life Care (EoLC)

Nottingham University Hospitals **NHS**
NHS Trust

End of Life Care is everyone's business at NUH

Strategic objectives:

- To provide care of the highest quality
- To provide the best experience for patients and their loved ones
- To have confident and supported staff

Measures of success:

For our patients, families and carers

- Treated with compassion and as a whole person
- Acknowledged by all that their time is valuable
- All patients recognised as dying have an individual end of life care plan that facilitates their choices
- Where feasible, patients are able to die in their preferred place of choice

For our staff

- Divisional leads for EOLC are visible for all staff and are driving forward improvements in end of life care in their divisions that are specific for their specialities
- Staff have increased competence and confidence in caring at EOL through an increase in the number of staff receiving face-to-face training and mandatory online training for EOLC

For NUH

- NUH has a reputation for delivering a high standard of EOLC for the benefits of patients, families, carers and staff
- NUH will know what choices matter for their patients, families and carers at EOL and will actively engage to enable these choices to be met
- The trust has effective stakeholder involvement and engagement including local community groups, public, volunteers and commissioners in steering and planning priorities for EOLC across the STP

EOLC objectives

We are here for you

NUH EoLC Strategy

To provide care of the highest quality	To provide the best experience for patients and their loved ones	To have confident and supportive staff
Roll out of improved EOL care plan documentation across NUH	Participation in the National Audit of the care of the dying	Electronic palliative care coordination system (EPaCCS) to be implemented in key clinical areas within acute care at NUH

What is EPaCCS ?

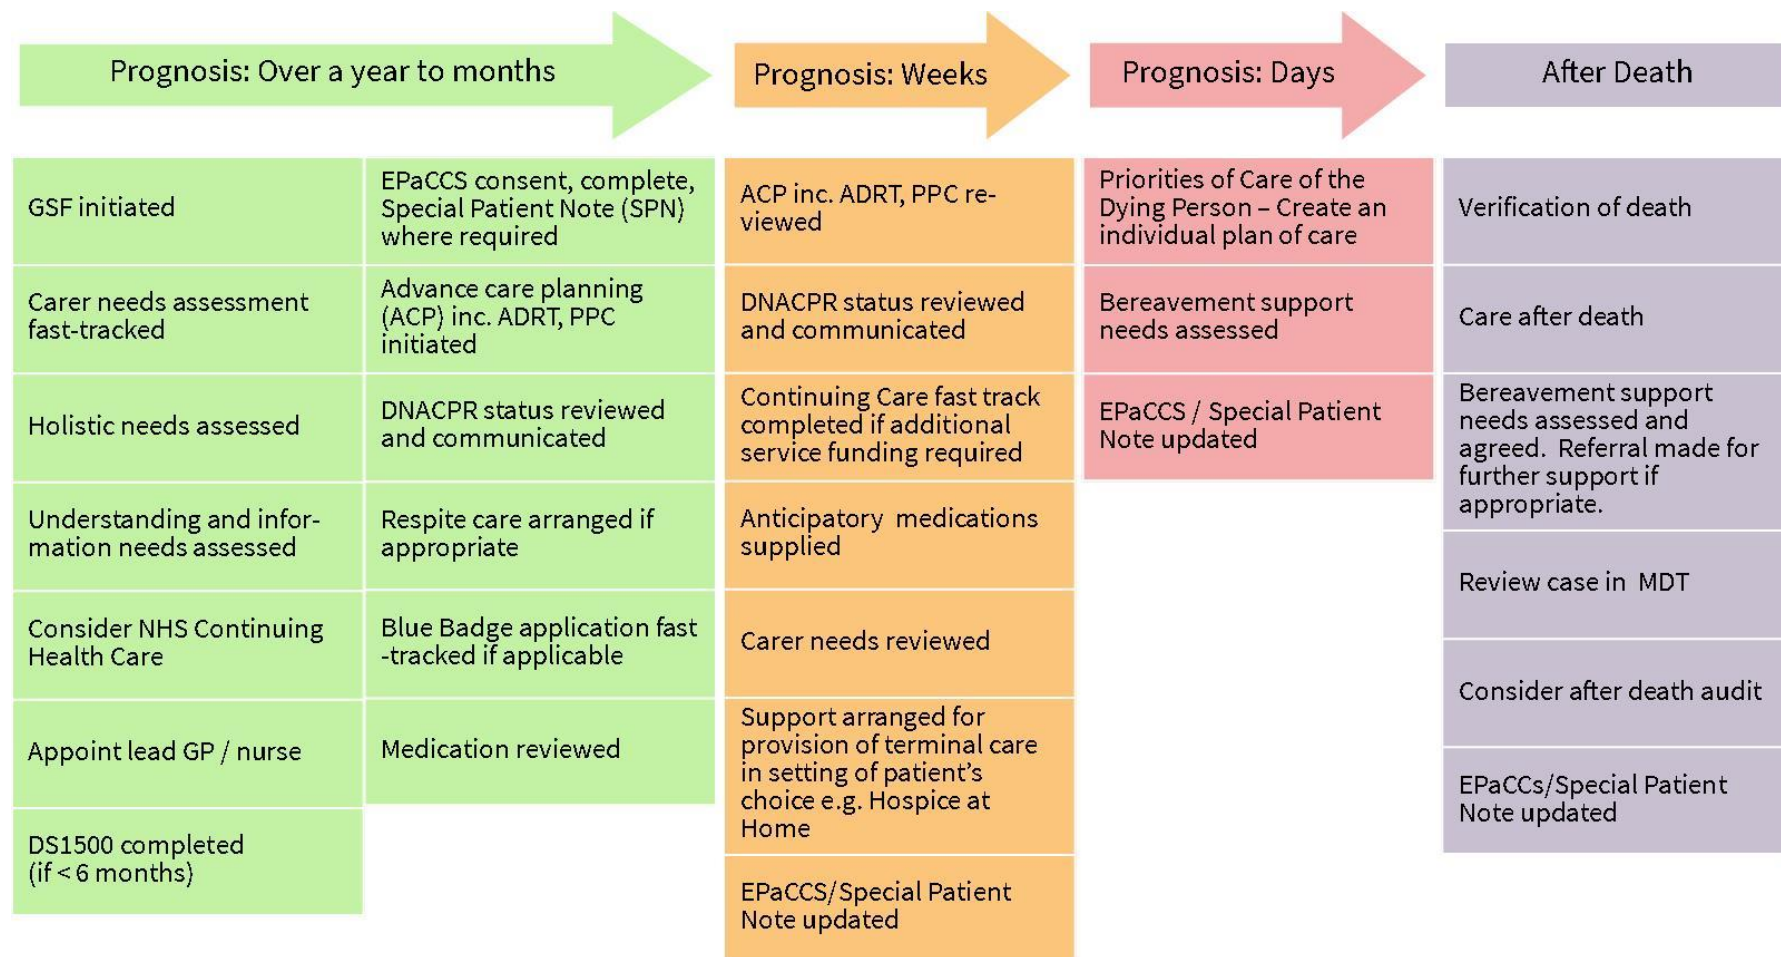

- A system that enables the recording and sharing of information about patient's end of life care wishes and preferences with those delivering care.
 - It supports coordination of care
 - Increases the proportion of people dying in their preferred place of death
 - Reduces hospital deaths and increases deaths in the home and in hospices
- (Public Health England, 2013)

EPaCCS template

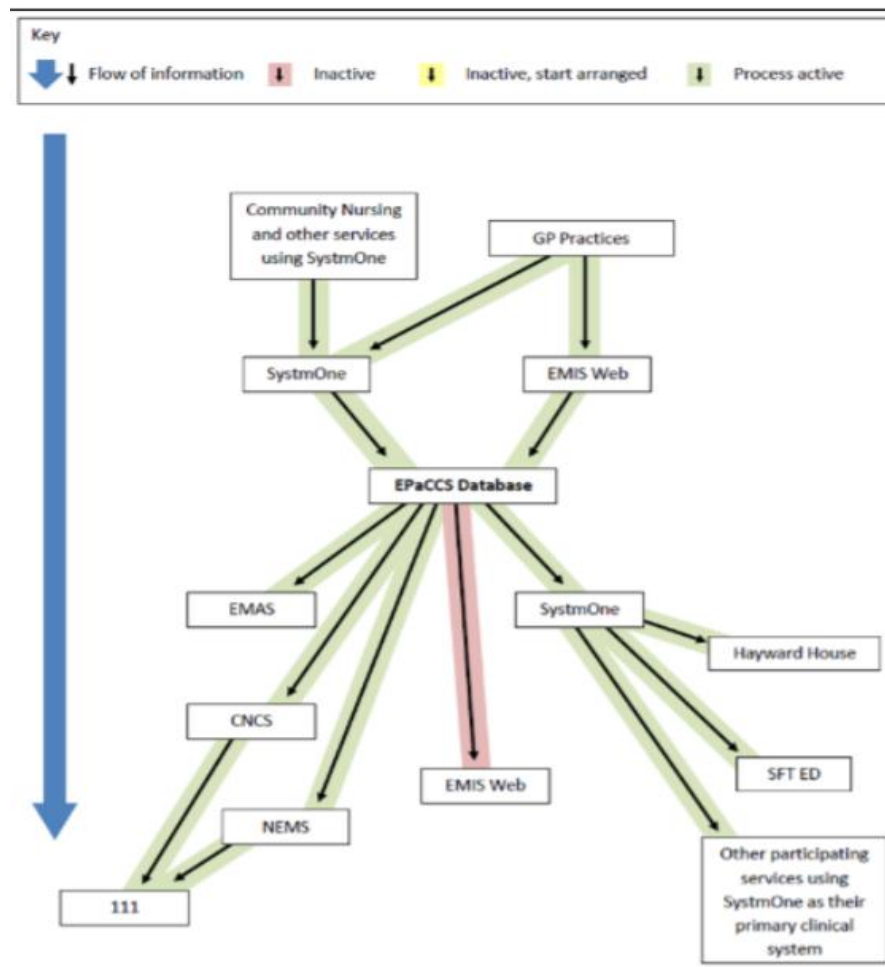

The figure displays five screenshots of the iPACES template, each showing a different section of the form. The templates are color-coded and labeled as follows:

- Initial Information (Blue):** This section includes fields for patient name, date of birth, and gender. It also has checkboxes for 'Consent to share End of Life Care Information' and 'Primary End of Life Diagnosis'. There are also checkboxes for 'Awareness of Diagnosis' and 'Awareness of Prognosis'.
- Advance Care Planning (Green):** This section includes a 'Preferred Place of Care' field with a dropdown menu. It also has a 'Hospital' field with a dropdown menu. There are checkboxes for 'Advance Care Planning' and 'Advance Care Planning'.
- Advance Care Planning (Orange):** This section includes a 'Preferred Place of Care' field with a dropdown menu. It also has a 'Hospital' field with a dropdown menu. There are checkboxes for 'Advance Care Planning' and 'Advance Care Planning'.
- Red Stage/First Steps (Red):** This section includes a 'Red Stage (First Steps)' field with a dropdown menu. It also has a 'Preferred place of death - 1st Choice' field with a dropdown menu. There are checkboxes for 'Anticipatory prescribing' and 'Anticipatory prescribing'.
- After Death (Purple):** This section includes a 'Place of Death' field with a dropdown menu. It also has a 'Date of death' field with a dropdown menu. There are checkboxes for 'Anticipatory prescribing' and 'Anticipatory prescribing'.

End of Life Planning: Details of Care Provision

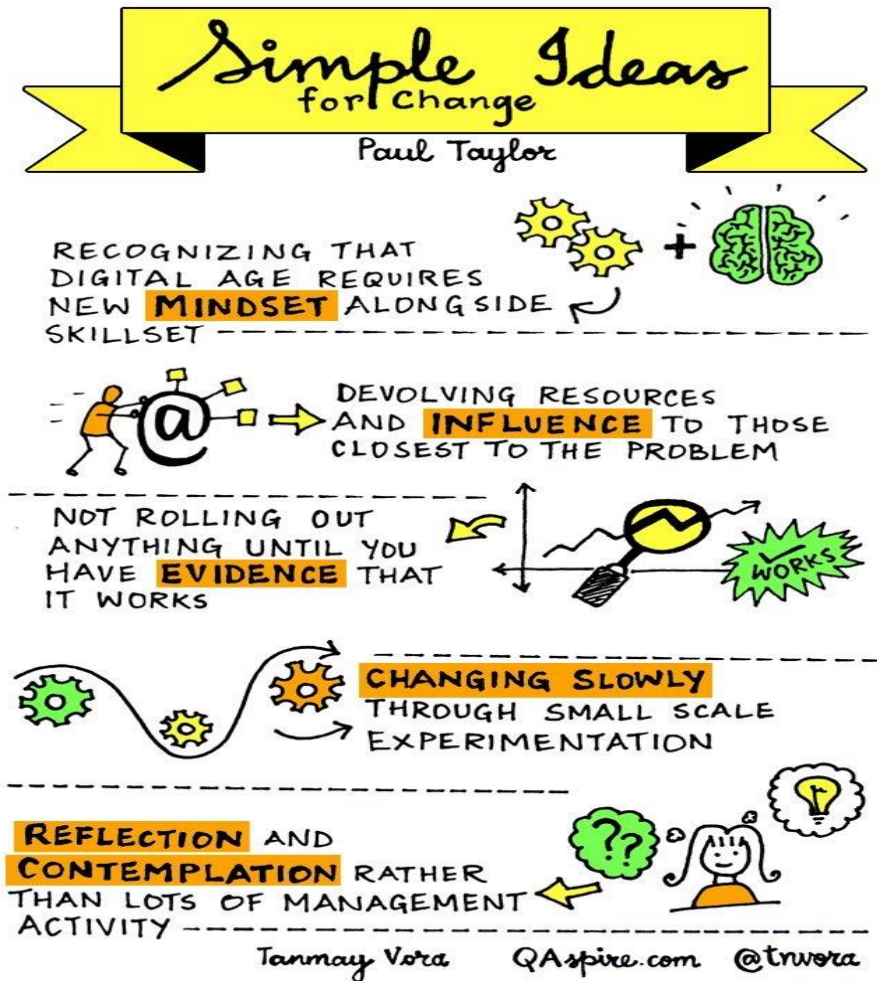

Flow of information with EPaCCS

Our Collaborative and Quality Improvement (QI)

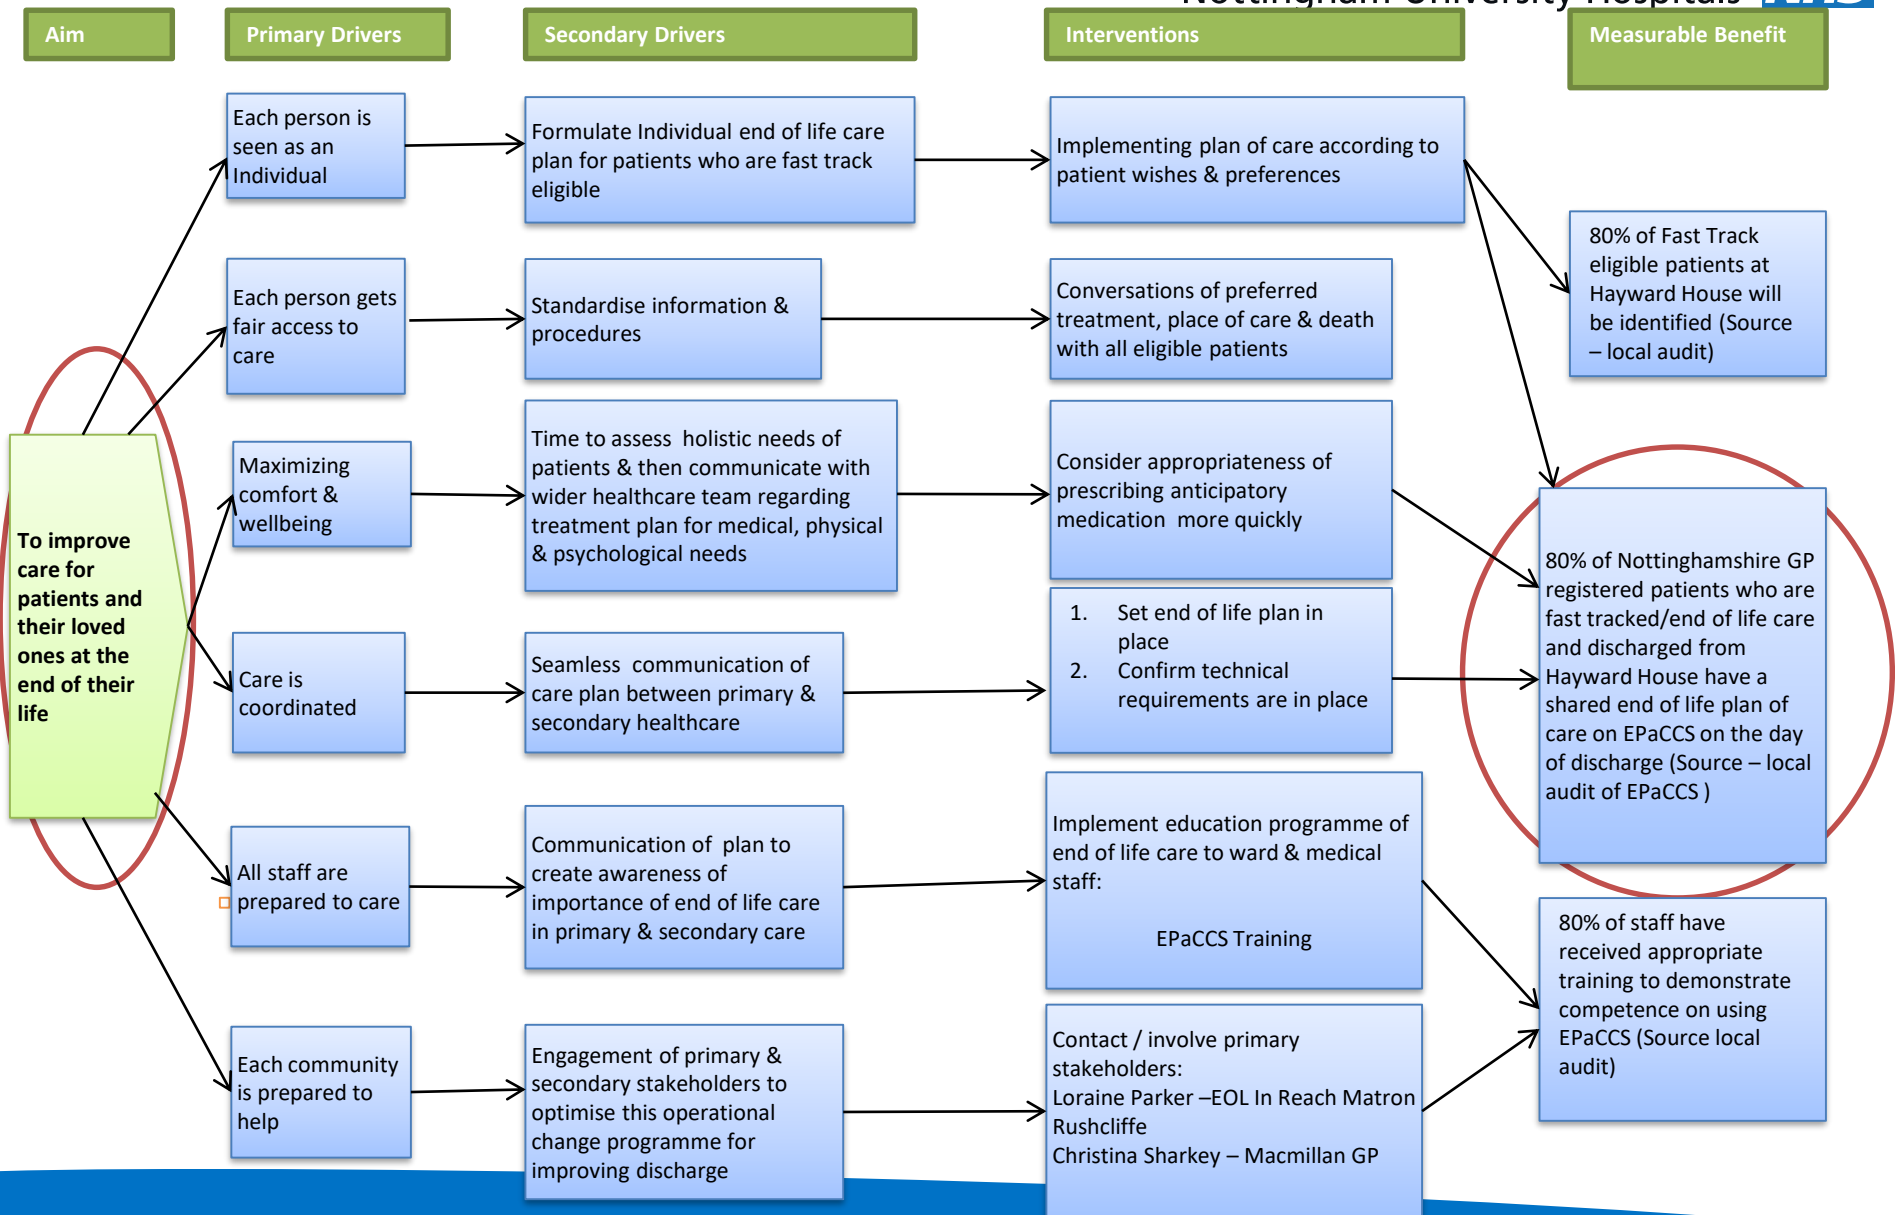

Quality:

- Safe
- Effective
- Patient-centred
- Timely
- Efficient
- Equitable

Quality Improvement:

‘A better patient experience and outcomes achieved through changing individual and organisation behaviour by using systematic change method and strategies.’

Initial challenges

- Leadership and collaborative working
- IT engagement
- Clinical engagement
- Interoperability of different systems
- Funding
- Implementation of project within 150 days
- Securing sustainability

Rapid improvement cycle

The aim of this programme is to:

- Improve the experience and quality of care received by patients at end of life
- Learn about quality improvement tools and techniques and put into practice
- Share best practice
- Improve our CQC rating for EoLC

What have we done PDSA's:

Secured one year funding for the licences to use EPaCCS

Identified key IT support personnel in the community

Engagement of clinical staff at different levels with the inpatient SpR and ward sister part of the project team

Improved efficiency of the discharge process for junior doctors by introducing the E-Discharge information guide

Formulated a communication plan with all primary and secondary care stakeholders and obtained feedback

Processes in place for ongoing monitoring and measuring outcomes

E Discharge information guide

H	History of diagnosis/admission
E	End of life register, EPaCCS
A	Advance care planning, anticipatory medications
R	Resuscitation status
T	Treatment plan, escalation of treatments

Quality of information in discharge summaries from Hayward House since implementation

BEFORE USE OF DISCHARGE GUIDE

Information regarding discharge

“ She was assessed by physiotherapy and OT teams and the impression is that she will need to be nursed in bed at home. Both she and her husband seem to understand”

AFTER USE OF DISCHARGE GUIDE

Information regarding discharge

“We have completed the EPaCCS template on the following-

P has been a fast track discharge.

She has been prescribed anticipatory medications.

She has a DNACPR in place.

Her preferred place of care has been home & she has been keen to attend her grandson's marriage in November.

I would be grateful if you could put her on the end of life register.

It would be appropriate to treat her reversible causes, for example infections with oral antibiotics”

Audit on EPaCCS entry

% of FT patients that had care plan on EPaCCS on discharge

PDSA's

Standardised the Hayward House discharge process – Amending the existing discharge guidance in Hayward House junior doctors Guidance

Continuous clinical staff engagement by presenting project and its potential benefits to the Hayward House Quality, Risk & Safety meeting and educational meeting.

Made the identification of patients for EPaCCS straight forward. From Jan 2018 onwards, EPaCCS entry for all discharges from Hayward House

Ensured that patients for discharge planning are identified early to enable entry onto EPaCCS . Daily reminder at morning Board Round

Process in place to provide in house training for new doctors as part of their induction

Qualitative feedback from the community & NUH team

‘Information entered onto EPaCCS was useful and helped coordinate patient’s care’.

‘the discharge letter was clear and concise’

GPs

‘avoided repeated difficult discussion’

‘reduce the need for patients to tell their story again’

DNs

‘helps coordinate patient’s care in the community and provides continuity’

Community Palliative Care nurse

<https://www.youtube.com/watch?v=U2C4mqG9LGA&feature=youtu.be>

Hayward House Junior doctor

‘ We get one chance to get this right for both the patient and their family ‘
‘EPaCCS gives us the opportunity to holistically care for a patient by communicating with colleagues in other settings and therefore provides continuity that hasn’t been possible in this setting before.’

Hayward House Ward sister

Qualitative PPI feedback

**Trish Cargill – Chair of
Patient Partnership Group**

**Katie Moore – Head of
Patient and Public
Involvement**

Terence's story

72 yr old man with metastatic pancreatic cancer.

Fast track discharged from Hayward House to home for EOLC and has preferences of care recorded on EPaCCS.

Lives in Nottingham but has Derbyshire GP and DN team

Passed away peacefully at home 18 days later.

'Information on the EPaCCS template was useful and avoided the repeated discussion on DNACPR'

Derbyshire District Nurse

'His preferences of care were clear on SystemOne'

'has made the referral process more efficient'

Derbyshire Community Macmillan Nurse

Next steps

- Change the measurable outcome to include all discharge from Hayward House from Jan 2018 onwards
- Continue to review effectiveness of the E-discharge guidance
- Continue to audit the measurable outcome from Jan 2018 onwards
- Identify another key IT support in the community and set up a more efficient way of transferring licences and gaining log in.
- Expanding project to other wards in the Trust

Aiming High – Sustainability Scores

Raising Awareness:

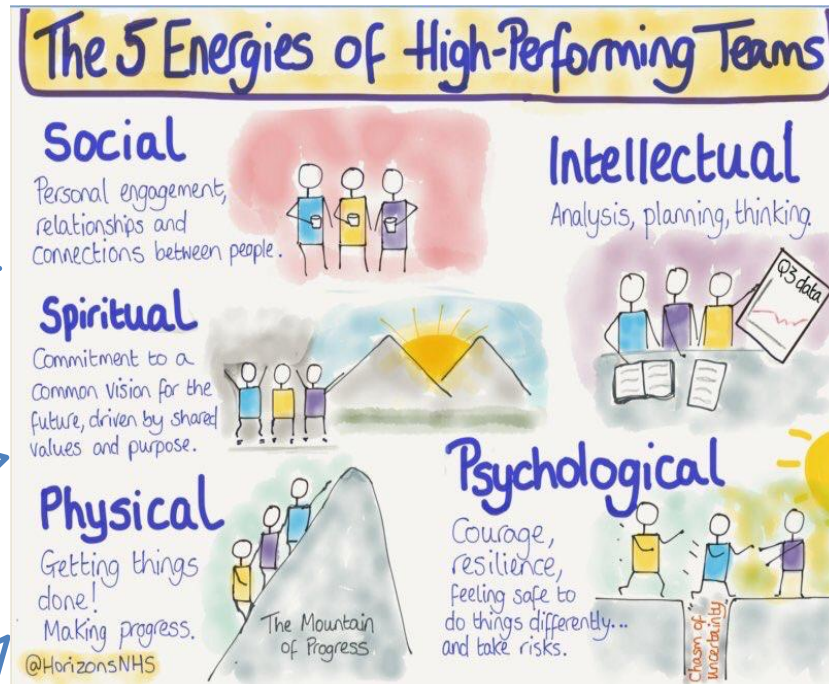

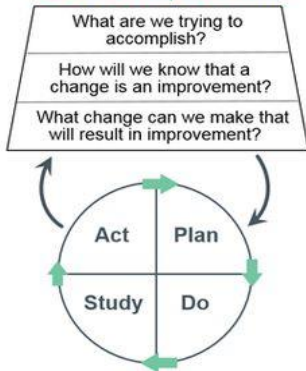

We are very proud of what has been achieved. We have shared and presented our outcomes at the National EoLC Collaborative Event, with Moorfields Eye Hospital as part of their visit to NUH, with our Nursing and Midwifery Board, through our internal Communications and via our Chief Nurse Blog. We also aim to share with our Patient and Partnership Group, NUH members and NUH Volunteers via their newsletters.

Closing Comments

Collaborative working has brought an energy of engagement, relationship connections.
"us and us" rather than "us and them"

The collaborative energy of commitment to a shared vision has driven the confidence to move towards a different future, more compelling than the status quo

Model for Improvement

Developing People – Improving Care

A national framework for action on improvement and leadership development in NHS-funded services

High energy from gaining insight from sustainability plans

Collaborative approach reinforced teams feeling supported to make changes. We used the 'ginger model' to gain feedback and insight
