

Patients Know Best

Making life better for children and families living with epilepsy

- a pilot project in Luton

Usha Panchal

Clinical Pharmacist and Complex Paediatric Lead
Bedfordshire, Luton and Milton Keynes Integrated Care Board (BLMK ICB)

Category: Innovative use of Technology, Social and Digital Media, PENNA Awards 2022

Scope of the project

- 3 year project which commenced in October 2020 and is funded by NHS England.
- Children under 18 years old with complex epilepsy, registered with a GP in Luton and who are seen by consultants at the Luton site of Bedfordshire Hospitals NHS Trusts and Epilepsy nurses at Cambridgeshire Community Services.
- Partner with Patients Know Best to deliver an integrated digitalised patient held record by consolidating information generated by the patient or parent alongside information from primary care and acute care
- It is the UK's most widely used and accessible patient-held record
- Available in over 20 languages and on any internet-enabled device.
- It is also integrated within the NHS App through the NHS login.

Welcome Usha Panchal

Welcome to your Patients Know Best online health record for Cambridge Community Services NHS Trust.

Here you will be able to see, share and record your medical information. You will also be able to access care plans and medical correspondence between yourself and clinical teams. As this service develops, your test results, appointment letters, and appointment details will also be available.

To access the record of someone you are caring for, use the [Sharing tab](#) or visit the [library](#) for further information from your team.

Please note: This service is not for emergency use and may not be monitored on a daily basis. For urgent medical care or advice call NHS 111. In case of serious injury or illness call 999 or visit your nearest A & E department.

Information is held about you. We need to have a complete picture of past, current and future health needs and treatment so that we can give you the best care.

Key Components of PKB

- **Two-way communication portal** enables carers and young adults to message and receive information.
- Users can **attach videos and documents for journals and files**
- A **seizure diary maintained by carers** can be accessed live by professionals at any time.
- A **library of medical information about epilepsy**, safety, lifestyle, prognosis, and links to other epilepsy websites which hold authentic information.
- **24-hour secure access to this platform** on any web-based digital equipment such as smart phone, desktop or mobile tablets.
- **Further plan is to integrate PKB with hospital and GP records** for appointments, tests, and discharge letters.

For the clinicians involved, PKB has meant that:

- partnership working with the parent/carer
- safety of prescriptions has improved
- medication review is much easier
- care plans are easier to maintain
- parents can be directed to the library
- videos are available which involve the parents to explain the different aspects of epilepsy care
- feeding into a National Audit for Epilepsy is much easier
- video secure-upload function means clinicians can give a quick review and opinion on seizures
- parents are able to manage their child's condition
- allows clinicians to prioritise messages
- availability of the seizure diary is helpful

For parents and Children, PKB has meant:

- reduced the burden of care
- all the information can be held digitally in one place
- don't have to worry about misplacing or losing information
- information is easier to retrieve
- **parents not having to keep repeating their stories**
- **patient experience has improved especially during admissions**
- **improved medicines safety**
- **makes appointments with tertiary clinicians more meaningful**
- **communication** with their health and care professionals has improved
- **it has enabled partnership working** for both patients and clinicians
- improved access
- **gives families the confidence to go away on holiday**
- **parents can offload any questions or queries by messaging** the clinician's day or night!

"our first family holiday was saved by PKB when our young child had a seizure that wasn't their usual type. We were able to message our epilepsy nurses Liz and Mary through PKB to ask for advice. Liz and Mary reassured us, meaning we didn't have to take our child to an unfamiliar hospital, or cut our holiday short and come home."

Lily has had a great first week back to school. She has settled into tulip class so well.

She had put on weight, she now weighs 20.2 kg which is a massive improvement.

She has only had one seizure at school this week. 🥳🥳🥳🥳🥳🥳

Lennox-Gastaut syndrome

- This epilepsy syndrome is uncommon and occurs in between 1 and 5 in every 100 children with epilepsy.
- However, it is the most common type of intractable (difficult to treat) childhood epilepsy. It is also known as an 'epileptic and developmental encephalopathy' because the epileptic seizures and the abnormal EEG are thought to be important in these children's developmental delay and learning difficulties.
- The most common time for Lennox- Gastaut syndrome to start is between 3 and 5 years of age although it can start as early as 18 months or as late as 7 years of age.

Send message 

As discussed on the phone. I am confirming that I have discussed the latest change in seizures with Dr Tekki Rao. He recommended that if she had another prolonged seizure of a head drop followed by recurrent episodes of head and eyes turning to right with apparent loss of awareness and dribbling, to call 999 after 30 minutes and give midazolam on their arrival if the cluster continues and there are no concerns about breathing.
Hopefully she will settle down and have a good holiday

Kind regards
Liz

Emergency Care Plan (PKB)

Action plan

Attached is the PDF of your child's emergency care plan. Please note — A member of the Epilepsy team will inform you if you need this treatment.

This care plan has been individualised to meet the needs of your child and should be followed in the case of an emergency, when rescue medication is required.

Please note — only trained family members and professionals are advised to administer rescue medication.

Please see videos below of how to give Buccolam & Epistatus for emergency treatment. Please check your brand of medication to ensure you watch the correct video.

Buccolam

Click [here](#) for more information about Buccolam.

Date: Review date:

EMERGENCY PLAN OF CARE FOR SEIZURES

Name:	Danny Duck-TestPatient	DOB:	01 Jan 2001
NHS:		Hospital No:	
Mother:		Contact No:	
Father:		Contact No:	

Current Medication

(Epilepsy medication only - if there is a list of other medications, supply separate appendix of medication from main care plan / attending hospital)

Description of Seizures:

(include any details on duration, frequency and recovery of seizures requiring rescue medication)

Name of Rescue Medication	Buccolam pre filled syringes mg/mL
	Please see dose below
Route of Rescue Medication	Buccal
First Dose:	mg pre-filled syringe
Second Dose:	mg pre-filled syringe

Do not repeat treatment within 24 hours or give more than twice in week / month
If Midazolam brand is changed contact Nurse so the Care Plan can be revised

Directions for use

(Eg for seizures lasting more than 5 minutes. Please specify directions for seizure clusters)

Guidelines for the Community

Identify need for Emergency Medication - if seizure continues for ... minutes

Give buccal Midazolam ---mg as Buccolam pre-filled syringe	Seizure stops - stay with Danny until fully recovered
